STAGE 5h | GATE COMMANDS -> SIX MOSFETS -> LC FILTER -> RL LOAD
Logic gates include 520 ns turn-on delay; the driver is not an electrical Vgs model.

N_AC: shared floating filter/load star; no direct connection to DC minus.

Six SPS MOSFETs: logic gate inputs, not an electrical IR2104 model.
Deadtime assumption 520 ns; Ron=44 mOhm; diode Rd=10 mOhm/Vf=0.8 V.
Numerical snubbers 100 kOhm. N_AC joins filter/load stars; no DC-minus bond.
